

ABSTRACT OF THE DISCLOSURE

A flash photography system includes a camera body,  
a main flash device and at least one sub-flash device,  
wherein the main flash device emits at least one low flash  
5 emission serving as a main-flash emission command signal  
to transmit the main-flash emission command signal to the  
sub-flash device, the sub-flash device emitting a flash  
emission in accordance with the main-flash emission  
command signal. The flash photography system includes a  
10 designating device for designating a flash emission mode  
of a main-flash emission, and a command device which  
activates the main flash device to emit the low flash  
emission serving as the main-flash emission command signal  
to transmit the main-flash emission command signal to the  
15 sub-flash device in a manner corresponding to the  
designated flash emission mode.
